Fix Number	Function

RD30000	OPTIONAL. Non-SMP/E format fix to zap the VTAM bit to zero to simulate TCAM. For users who can't start TSO under CONSOLE-Master due to the VTAM bit being on.
FIX TYPE	** Zap **
MODULES	** CTSO **
MACROS	** **
PREREQS	** **

RD30001	PLACE HOLDER: This change is incorporated into CONSOLE-Master V3R0 base. It changes the CPUID validation check from 6 digits to 4 digits.
FIX TYPE	** **
MODULES	** CTSO **
MACROS	** **
PREREQS	** **

RD30002	PLACE HOLDER: This change is incorporated into CONSOLE-Master V3R0 base. It prevents a system failure with WAIT STATE CODE 014 when executing the TSO Session Manager option.
FIX TYPE	** **
MODULES	** CTSOS93 **
MACROS	** **
PREREQS	** **

RD30003	PLACE HOLDER: This fix is already incorporated into the CONSOLE-Master V3R0 base. It allows the specification of CPUID as '0000000000000000' in the CMOPTS macro without its being counted as an actual encoded CPU serial number.
