Transport
Present

Capture, Transform, Transport, Present™

Our suite of data and document solutions enable you to pull data from multiple discrete sources and instantly repurpose that information to enhance critical business processes. Our software products support standards including XML, EDI, ebXML, PDF and all major document data stream formats, integrating with your existing infrastructure.

Capture: Xenos solutions let you intercept relevant data and documents from any application, repository or data stream, enabling real-time processing.

Transform: Transform captured data from any format to any other format seamlessly and rapidly, assemble data and content according to customized business rules, and repurpose business information to make it personalized and/or actionable for any end-user.

Transport: Securely transport your business information between any database, archive, application or consumer or route it directly to back-office systems through any available channel of delivery—in any preferred format.

Present: Enable timely presentment of statements, invoices, transactions—presented how, when, and where over multiple electronic channels—for both internal representatives or decision-makers and external self-service.

Advantages of Xenos Technology Within Your Application

Performance

- Persistence—once initialized, content-distribution solutions stay available for dynamic, real-time transactions
- Multi-threading provides scalability for high volume transaction applications

Robust Component-based Architectures

- Java-based architecture with a powerful API for performance-based integration
- Provides the ability to add components and custom functions for extraordinary functionality
- Web services integration supports customized portal deployments

Rapid Deployment

- Visual Development Tools to speed development and integration
- d2e Developer Studio provides drag and drop functions for project set-up and to define business logic
- TerminalONE provides an easy-to-use visual mapping and configuration interface (with 80+ built-in functions) allowing your analysts to rapidly make changes to business rules

Our Product Portfolio

Xenos **terminalONE™** for B2B transaction processing

- Easy-to-use visual mapping interface with 80+ built-in functions allows your analysts to rapidly make changes to data mapping rules
- Supports data in virtually any format through XML-based data dictionaries, including:
 - Input Data Formats: COBOL Copybooks, CSV, Databases (using JDBC and ODBC), EDI HIPAA, EDIX12, EDIFACT, Flat Text, Java Objects, PDF Forms, XML
 - Output Data Formats: All of the above, plus SQL and XBRL

- Sends and receives data through a variety of delivery channels, including:
 - File Systems, FTP (SSL optional), ebXML, HTTP (SSL optional), JMS, Secure FTP, SMTP
- Provides a Java-based framework to intelligently route transactions based on content, source or method of delivery

Xenos **d2e™** for high-speed document data stream repurposing

- Powerful real-time document data stream field extraction, indexing and document separation
- Multithreading and scalability for high speed performance
- Component architecture and powerful API
- Transforms from all major print and electronic formats (AFP, Metacode, PCL, PDF and TIFF) and repurposes into all major electronic (PDF, Image, TIFF, HTML/CSS) and print formats (AFP, Metacode, PCL and Postscript)
- High-performance data extraction and indexing for electronic content management (ECM) archive loading
- Integration with virtually any ECM archive or web presentment system
- Optimized for batch and real-time dynamic document retrieval and presentment environments
- On-the-fly application of business logic
- Multiple parsers and generators in a single cross-platform component architecture
- Easy-to-use application development interface

Xenos **infoWEB™** for secure electronic presentment

- Multi-channel distribution of electronic documents via the web, email, fax, file system
- Multi-channel electronic statement presentment
- Client dashboard for report presentment, administration and monitoring
- Configuring and application of business rules for the processing, securing, routing and delivery of information
- Storage and retrieval of unlimited document formats
