

Secure electronic presentment

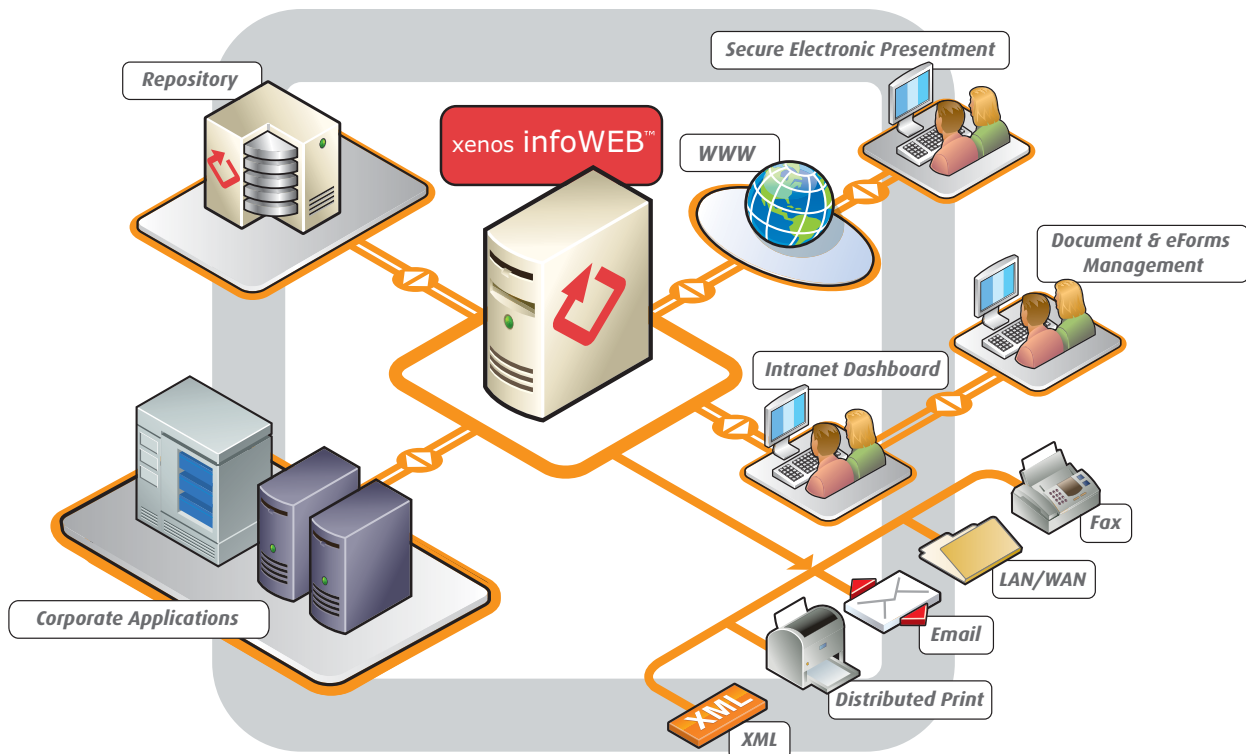

Optimize the flow of information across the enterprise and beyond with a complete solution, including secure electronic presentment, multichannel report delivery, and document and eforms management. Xenos infoWEB provides a centrally managed and cost-effective solution for the distribution of timely and actionable business information right to those who need it—helping you improve collaboration, business decision-making and customer service while maximizing corporate performance.

Leverage your current resources without affecting existing infrastructure. Xenos infoWEB lets you capture, transform and deliver information produced from any corporate application in any print stream format, and secure and control Microsoft Office content, scanned images and structured data. Then streamline routing across multiple channels, be it web, corporate portal, email, fax, print, or file system.

Improve customer responsiveness by enabling electronic statement presentment and self-service channels for your customers. Provide your customer support

representatives with the information they need—in real-time, exactly as presented to customers—allowing them to respond effectively and immediately to inquiries.

Enjoy unparalleled return on investment with a measurable reduction in storage, printing, mailing and labour costs and improved operational efficiencies that let your employees focus on the business of your business. Ease of use, rapid deployment and adoption, reliability and scalability based on your changing demand all contribute to the Xenos infoWEB advantage—and to your peace of mind.

xenos infoWEB™
